JOBS | FYNDSTER

Fyndster: Smart Contact Book with Superpowers (www.fyndster.com) | *Mar 2022 - Present*

Fyndster is a smart contact book that solves the problem of traditional contact books, such as Lost Contacts, Outdated Contacts, Duplicate Contacts and features like Auto Cloud Contact Back-up, Unique Fyndster Cards, etc.

 My Responsibilities:

- Working on the admin portal(admin.fyndster.com) to develop the feature of card verification.
- Reserve Cid feature development.
- QA, main fyndster.com application & mobile app.

Technologies: NuxtJs, HTML5, CSS, TailwindCSS, Python, Flask, MongoDB, GCloud, Android

INTERNSHIP

Just Vegan | Fyndster (http://justvegan.fit)

Just Vegan is an online store that sells only vegan food products, It catalogs the dishes in 4 categories, Breakfast, Lunch, Snacks, and Dinner. People can place the order once or also schedule recursive delivery. My Responsibilities:

- Built the entire front-end from scratch using ReactJs.
- Added modules like Dishes, Admin(Dishes/Offers), My Accounts, Checkout, etc.
- Wrote the entire HTML, and CSS using TailwindCSS, based on the design mock-ups.

Technologies: ReactJs, HTML5, CSS, TailwindCSS, Web APIs

ABOUT ME

 I am a Front-end Engineer having 2.5+ years of experience, working with technologies like ReactJs, JavaScript, HTML5, CSS, TailwindCSS, etc.

I have a keen interest in front-end frameworks and would love to continue building my knowledge on that and I hope to contribute to the Open Source Community soon.

SKILLS

ReactJs, JavaScript, HTML5, CSS, TailwindCSS

LANGUAGES

English (Proficient), Hindi (Proficient)

PROJECTS

News-App | Personal project ([Github](#))

I have built my news app where I will see the latest news in India.

- Built the home page of NewsApp with the discovery of news among categories such as Finance, Sports, Movies, Science, Technology, etc.
- Built custom pages for each category.
- Used API endpoint from newsapi.org (https://newsapi.org/v2/top-headlines)
- Created a custom new apiKey & implemented the UI using it.

Technologies: ReactJs, HTML5, CSS, TailwindCSS, Web APIs

FastFood Management System | College Project ([Github](#))

May 2022

I built a fast food management project during my college course project. Where a restaurant manager can manage/bill food orders for a customer

- Built the full responsive dashboard of a fast food management system.
- An admin user can add/update/delete food menu items.
- Update pricing of dishes, that would immediately reflect during the billing.

Technologies: VB.net, HTML5, CSS, My Access DB
